AmeriLux News

AmeriLux International is a value-adding distributor of multiwall and corrugated polycarbonate sheet products, PVC sheet and liner panels, and steel coil.

Featured Project:

Kalahari Resort Indoor Waterpark

"Natural Light Creates an Outdoor Atmosphere"

The Kalahari Resort in the Poconos earned the title "America's Largest Indoor Waterpark" last month with the completion of an 110,000 sq. ft. expansion; doubling the Pennsylvania waterpark's size to a massive 220,000 sq. ft. The waterpark features nearly every aquatic attraction imaginable.

Illuminated with natural light, the waterpark offers guests a tropical feel even when the outdoor temperatures are plummeting and snow is falling. The abundant daylighting is provided by three skylights, two large translucent roofs, three glass clearstories and two high glass walls designed and built by OpenAire.

Two of three customized skylights are large pyramid style structures measuring 50' x 50'. The skylights are glazed with CoverLite 25mm CoverLite Triplewall 2UV Clear polycarbonate. Polycarbonate panels are often used in waterpark or pool enclosure glazing applications. Compared to glass, polycarbonate is lighter and more cost effective, often three to four times less expensive. Because polycarbonate panels are light in weight, they are easier to install. UV-protection on both sides of the sheet saves time and minimizes installation mistakes.

"The skylights and roof let in abundant sunlight, transforming indoor spaces with an outdoor atmosphere," said Angela Goldrup, Marketing Manager with OpenAire. "In this case, Kalahari has the best of both an

indoor and an outdoor-style waterpark environment."

Meet the A-Team:

Sadig Huseynov | Account Manager - AmeriLux Logistics

This past January, Sadig Huseynov joined AmeriLux Logistics, a full-service freight brokerage division of AmeriLux International. After working for Schneider National for almost two years, Sadig was excited for a new opportunity to expand his experience and knowledge of the logistics industry.

As an Account Manager, Sadig coordinates incoming and outgoing freight shipments for both AmeriLux International and AmeriLux Logistics. His role involves finding unique solutions to customer's logistics challenges. "I enjoy helping customers keep their promises to their customers," said Sadig.

When asked what the most challenging part of his job is, Sadig responded with this answer: "Waking up in the morning," he said with a smile. "I'm just kidding. I would have to say some of the miscommunication or lack of communication by carriers." This challenge, of course, is taken in stride. Follow-up and accountability by the logistics team keeps everything running smoothly!

Fun Fact: Sadig speaks four languages - Azerbaijani (native), Russian, Turkish, and English.

AmeriLux Logistics views freight transportation as much more than just a simple forwarding operation. For more information on the brokerage services offered, please contact AmeriLux Logistics at 920.425.3550.

Building Collaboration Skills

Strings, Pringles cans, and ping pong balls - what do they have to do with team building? AmeriLux employees took half a day away from their busy schedules to play the "AmeriLux Transportation" game.

Teams were challenged to build a transport system to carry ping pong balls, and learned some valuable lessons along the way about team dynamics. For example, one of AmeriLux's core values, "Conflict is a Good Thing", corresponds to a stage of team formation called Storming. Bring on the constructive conflict!

Employees live out our core values everyday. It's [how we succeed at AmeriLux!](#)

Governor Walker Travels to AmeriLux

Governor Scott Walker traveled to De Pere, WI last week to sign a labor bill that was passed out of the state legislature last month. Despite the windy conditions, the bill signing took place at the recently expanded parking lot of AmeriLux International; right in front of AmeriLux's building addition construction site.

The jobsite was chosen for the event by ABC member [Keller, Inc.](#), the general contractor on the building expansion project. [Click here for a video of the event.](#)

Ask the Tech Expert

Q: In the case of a fire, what would happen to a polycarbonate sheet?

A: Like any plastic, a polycarbonate sheet will burn

DIY Tip of the Month

"Spring Cleaning"

Polycarbonate Do's & Don'ts

Do gently clean with lukewarm water.

thermal insulation, strength and durability in a lightweight sheet.

The sheets triplewall structure has three walls and two "air-trapping" layers; greatly increasing its thermal insulation properties and its ability to withstand higher wind and snow loads.

The two-sided ultraviolet (UV) protection provides excellent weather resistance and eliminates accidentally installing the sheet with the unprotected side facing outward.

From skylights to pool covers to partition walls, these sheets deliver easy-to-install exterior and interior applications that are built to last.

Find the right glazing panel for your next project. [Click here to ask a tech expert.](#)

but it will burn at a very slow rate. Self-extinguishing when removed from the flame source.

Polycarbonate sheets have good fire behavior characteristics. Their flammability rate is low and they do not contribute significantly to the spread of a fire nor do they release toxic fumes.

Polycarbonate sheets receive high fire performance ratings, meeting the requirements of stringent fire-performance building codes and standards. Because of their high fire resistance, polycarbonate sheets are a recommended choice for glazing applications in school, hospitals, and other public venues.
